IT SERVICES FROM KONICA MINOLTA

ALL COVERED CLOUD SERVERS VIRTUAL INFRASTRUCTURE

With All Covered Cloud Servers, you can specify the configuration you need for virtual CPU, RAM, three tiers of storage and bandwidth. You are not locked into rigid server configurations which often lead to overpaying for underutilized resources. It is easy to add, delete or modify server resources as your needs change. Our flexible pricing model allows us to package the ideal resources for your cloud infrastructure, offering you the most competitive price for the resources you actually use.

THREE TYPES OF STORAGE DATA WITH DATA BACKUP AND FLEXIBLE RETENTION

All Covered Cloud Servers offer ultra high speed solid-state storage (SSD), high performance SAS-like storage and cost-effective SATA-like storage in the same platform. You can optimize your performance or reduce costs by implementing the most appropriate storage for your application. This allows you to run services with intense I/O needs, and use lower cost storage for those services and applications which have lower disk throughput requirements. All cloud storage is SAN-based for optimal performance regardless of tier, and includes an automatic backup of your data every 24 hours with a 14-day retention period. Longer retention periods are available for those who need to address compliance and business needs.

COLOCATION AVAILABILITY

Your move to the cloud is not an all or nothing proposition. You may have existing physical servers, VoIP/FoIP hardware, anti-spam or backup appliances, or other devices that you will want to retain as part of your new infrastructure. You may have a new server that still has several years left in its lifecycle. With All Covered Cloud Servers, you can move customer owned hardware and colocate the servers and devices you still need. With your move to the cloud, you gain access to our SSAE-18 SOC2 Type 2 audited data centers and reap the benefits that come from moving your hardware to a world-class facility while protecting your infrastructure investment.

VERSATILE SOFTWARE LICENSING

As part of your server environment, many software licensing options are available to suit your business needs. In lieu of traditional software licensing, All Covered offers monthly subscription-based licensing for many common applications, such as Exchange, SharePoint, and SQL Server. Citrix licenses can also be added. Alternatively, you may provide the appropriate server licenses for any line of business application that you would like to run on our Cloud Servers platform, so long as they comply with vendor licensing requirements.

SERVICE OVERVIEW

As there are many options for licensing, the following table illustrates what is included with the server, and what additional licensing options are available on a monthly subscription basis.

OPERATING SYSTEM OR APPLICATION SOFTWARE	INCLUDED	MONTHLY OPTION	CLIENT PROVIDED
Windows Server (supported versions)	<input checked="" type="checkbox"/>		<input checked="" type="checkbox"/>
Microsoft IIS			<input checked="" type="checkbox"/>
Microsoft Exchange		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Microsoft SharePoint		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Microsoft Lync		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Microsoft SQL Server		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Microsoft Remote Desktop		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Citrix		<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Other application server software			<input checked="" type="checkbox"/>

ALL COVERED CLOUD SERVICES TEAM

As part of your move to All Covered's Cloud Servers solution, our team of cloud experts will determine the requirements to transition your current environment to the cloud. As part of this process, we will examine your current infrastructure to ensure that the environment is optimized for your business needs. Cloud migration projects can include services such as:

- Physical to Virtual (P to V) migration of servers
- Virtual to Virtual (V to V) migration of servers
- Application upgrades
- Server consolidation
- Business continuity and disaster recovery
- Network traffic analysis, remote access and VPN configuration
- Data security and protection

Let All Covered's team of experts put our years of cloud computing experience to work for you.
